Cloud Security Engineer with 4+ years of experience in cloud-native security, DevSecOps, and experience across AWS and GCP. Expertise in Kubernetes security, IAM hardening, IaC security (Terraform), CI/CD pipeline security, container security, and cloud misconfiguration detection aligned with CIS Benchmarks.

EXPERIENCE

Cognara | DevOps Engineer (Contract) | *May 2025-Aug 2025 | Nov 2025 - April 2026*

- Eliminated hardcoded AWS credentials by migrating the backend to ECS task roles with custom least-privilege permissions, reducing access from AdministratorAccess-equivalent (1,500+ actions) to 180 actions using Pike to statically analyze the Terraform infrastructure
- Replaced a shared-SSH-key bastion with a self-hosted EC2 bastion that provisions per-engineer access from a managed GitHub username allowlist, eliminating shared credential risk across 10+ engineers and enabling per-user SSH session auditability.
- Built an EKS-based data migration pipeline (AWS DataSync, DMS, SQS) delivered as a reusable client tool; secured AWS access via IRSA with a custom least-privilege IAM policy, eliminating long-lived credentials

arch0 | Cloud Integration Engineer | *November 2023 - February 2025*

- Developed 30+ automated GCP security checks in Go for the core CSPM engine, covering IAM, GCS, BigQuery, and Compute Engine, aligned with CIS Benchmarks, enabling customers to proactively detect and remediate misconfigurations
- Expanded the platform's coverage by building GCP, GitHub, and Google Workspace integrations from scratch
- Automated internal AWS infrastructure provisioning with Terraform and Terragrunt via GitHub Actions, using OIDC federation to assume AWS roles without long-lived access keys, reducing environment setup time by 85%.

we45 | Cloud Native Security Lead | *June 2021 - August 2023*

- Designed the first GCP sandbox on AppSecEngineer with per-student isolation provisioning a dedicated GCP project and Workspace user per learner, with Organization Policy constraints restricting blast radius
- Authored 50+ hands-on GCP and Kubernetes security labs covering IAM, network security, KMS, Secret Manager, Kubernetes workload security, and runtime/policy enforcement using Falco and Kyverno

- Developed and delivered Google Cloud and Kubernetes security training to 200+ clients across international conferences and private sessions, including Black Hat.

CORE COMPETENCIES

AWS: IAM, ECS, EKS, EC2, S3, RDS, Lambda, SQS, SNS, DMS, DataSync, ECR, Secrets Manager, Parameter Store, KMS, CloudTrail, GuardDuty, Security Hub, VPC

GCP: IAM, GCS, BigQuery, Compute Engine, GKE, KMS, Secret Manager, Organization Policy

Cloud Security: CSPM, IAM hardening, least-privilege policy design, cloud misconfiguration detection, secrets management, CIS Benchmarks, multi-tenant isolation, OIDC federation

Container & Kubernetes Security: RBAC, Pod Security Standards, Network Policies, admission controllers, runtime security (Falco), policy enforcement (Kyverno), image scanning (Trivy), IRSA, Workload Identity

CI/CD & IAC: GitHub Actions, GitLab CI, Terraform, Terragrunt

Programming: Python, Go, Bash

PROJECTS

[GCP-Goat](#)

A deliberately vulnerable GCP environment for learning cloud security, covering IAM privilege escalation, GCS misconfigurations, hardcoded service account credentials, and GKE attack scenarios. Featured at DEF CON Cloud Village and Hack In The Box Armory.

OPEN SOURCE & TALKS

Speaker/Trainer:

- **DEF CON Cloud Village** - Understanding Common Google Cloud Misconfigurations using GCP-Goat
- **Hack In The Box Armory** - GCP-Goat (Tool Showcase)
- **OWASP Seaside** - Introduction to Building & Securing your CI/CD Pipelines

Contributor:

- **Prowler:** Fixed false positive GCP security checks in Prowler, an open-source cloud security tool used by thousands of companies worldwide ([link](#))

CERTIFICATIONS

Google Cloud Certified - Associate Cloud Engineer

EDUCATION

M.Tech Software Engineering (Integrated) - Vellore Institute of Technology, Chennai | CGPA: 8.9
